

2. (Twice amended) An aerosol [container according to claim 1] container system according to claim 1<sup>1</sup>, wherein the plastics coating is polytetrafluoroethylene or perfluoroethylenepropylene.

C 3. (Twice amended) An aerosol [container according to claim 1] container system according to claim 1<sup>1</sup>, wherein the thickness of the container wall is in the range from approximately 0.1 mm to approximately 2 mm, and the thickness of the plastics coating is in the range from approximately 1nm to approximately 1 mm.

4. (Once amended) An aerosol [container according to claim 1] container system according to claim 1<sup>1</sup>, wherein the volume of the interior of the container is in the range from approximately 1 ml to approximately 100 ml and the volume of the metering chamber is from approximately 5  $\mu$ l to approximately 400  $\mu$ l.

5. (Thrice amended) Method for the storage and administration of a pharmaceutically active aerosol in the form of a suspension, the suspension including a pharmaceutically active agent and a propellant gas that is free of fluorochlorohydrocarbons, wherein a [container according to claim 1] container system according to claim 1<sup>1</sup> is used.

C<sup>2</sup> 9. (Once amended) An aerosol [container according to claim 1] container system according to claim 1<sup>1</sup>, wherein the propellant gas consists essentially of fluorohydrocarbons.

10. (Once amended) An aerosol [container according to claim 1] container system according to claim 1<sup>1</sup>, wherein the suspension further includes cosolvents and/or surfactants.
